

# Multi-Clad & Multi-Clad DT5

Multi-Clad with optional horizontal arm

Multi-Clad with optional vertical arm

## Five Configuration Lifter

A popular choice for installing horizontal and vertical wall panels as well as roofing panels, the Multi-Clad vacuum lifter series comes with the flexibility of 5 configurations and a choice of round or oval pads to suit varying panel lengths and shapes

### Multi-Clad

As a single device, the Multi-Clad can install horizontal wall and roof panels up to 8 metres long and vertical panels up to 18 metres long, with an overall capacity of 400kg (depending on the number of pads)

### Multi-Clad DT5

Optional 5 metre cross beams can be attached to the modular Multi-Clad for the installation of roof panels up to 14 metres. The DT5 comes with a 7 metre long cable suspension gear which allows the pitch angle for roof panels to be set. Both models come with an on-board control panel and vacuum release.

### Key Features

- Capacity: 400kg
- Suitable for roof panels up to 8m or 14m, vertical wall panels up to 18m and horizontal wall panels up to 8m
- Dual circuit vacuum system with vacuum gauge, reserve tank and non-return valve for each circuit
- 90° tilt (on single device with vertical arm)
- Integrated battery charge meter
- 110/240v external charger system
- Audio-visual low vacuum warning
- Optional accessories: 3m cable suspension gear for roof panels, 2m panel width conversion kit, vertical or horizontal lifting arm

Optional secondary safety straps
